Workforce Statistics

Introduction

Workforce statistics can help you understand which specialties are growing, the level of competition for training places, whether there may be consultant vacancies when you achieve entry to the specialist register, in which specialties you are most likely to find opportunities to work flexibly or whether demand for specialists in a particular field is decreasing.

If you are unsure how this information can help you understand the workforce dynamics of this specialty, click on the 'How does this information help me?' link at the end of each section for a simple explanation.

On this page we have information for England only. For information regarding Scotland, Wales and Northern Ireland please click on the links below.

(NHS Scotland workforce information)

(NHS Wales workforce information)

(Northern Ireland workforce information)

The information provided is supplied by the Centre for Workforce Intelligence (CfWI). The Centre for Workforce Intelligence (CfWI) is the new national authority on workforce planning and development providing advice and information to the NHS and social care system.

CfWI have a mission to become the primary source of workforce intelligence for health and social care. They produce quality intelligence to inform better workforce planning, in order to improve people's lives.

The work of the CfWI does not necessarily reflect the views of the Department of Health.
